1. Overview

This document explains the functionality of the Open Access Same-Time Information System (OASIS) API. In this document the following are described:

- ❖ Background of OASIS.
- ❖ URL Parameter definitions for requesting OASIS data.
- ❖ Naming Convention for Returned OASIS files.
- ❖ Schema (XSD) for returned OASIS XML data.

1.1 Background – Time Horizons

The California Independent System Operator's (CAISO) Open Access Same-time information System (OASIS) provides energy market and power grid information to the public and market participants, through reports with real time updates. This information includes the following:

- ❖ System load requirements
- ❖ Market Price information
- ❖ Transmission availability
- ❖ System demand conditions

The data is categorized into three groups:

Category	Description
OASIS Data	This is the CAISO operational and market data.
Public Bids	This is the Public Bid data published after 90 days.
Atlas Data	This is the reference data supporting OASIS Data.

Its own XSD Schema, described in this document, supports each category.

To automate the download of the OASIS report data in XML, the information in this document describes the OASIS XML format and the download procedures, including URL examples associated with the XML data files.

Time Horizons for CAISO Public Data postings:

- **GMT version services for ISO Market**

The URL for the GMT version of the OASIS API web services is
<http://oasis.caiso.com/oasisapi>

This API document describes the functions for this version of OASIS.

2. Data Request to API

CAISO's OASIS is redesigned to adapt to the changes in the markets and grid operations initiated by the New ISO Market program. However, the technology of the new OASIS for downloading data is quite similar to the existing OASIS. The process of obtaining data from OASIS by automation using its API can be described as queries implemented through URL Servlet requests. It can be defined as sending URL requests with parameters to the OASIS web servers, from the Users web client.

2.1 API URL for single reports

Single report request will be using the servlet called SingleZip. The return of XML in CIM format will be based on XSDs specified above. The data content will be based on the type parameters will be passed to the SingleZip request. To illustrate the URL and its parameters, we show the pattern that would return an XML file based on the Schemas.

```
URL?queryname=<A>&startdatetime=<D>&enddatetime=<D>&market_run_id=<A>&version=<A>&varParameters
```

Where:

```
URL = http://oasiswebsite/context-path/SingleZip
```

```
For production : oasiswebsite = oasis.caiso.com
```

```
context-path = oasisapi
```

```
For mapstage : oasiswebsite = oasis.caiso.com
```

```
context-path = oasisapi
```

Mandatory Parameters:

```
startdatetime = valid operating start datetime in GMT  
(yyyymmddThh24:miZ)
```

```
enddatetime = valid operating end datetime in GMT (yyyymmddThh24:miZ)  
which is equal or greater than <startdate>
```

```
queryname = valid reportname,  
refer to the XML Query Name in the document
```

```
market_run_id = valid market type
```

```
version = API version (1 for the GMT 2013 release)
```

Variable Parameters:

```
varParameters
```

```
variable Parameters are defined for each Report  
and its specific Filter options
```

2.1.1. Example URL for the ISO Market *Simulation* Environment

To illustrate the use of the URL and its parameters, we show an example based on the pattern above: This string indicates the proper path to query data that exists in our Market Simulation Environment.

```
http://oasismap.caiso.com/oasisapi/SingleZip?queryname=AS_REQ&
```

```
startdatetime=20130919T07:00-0000&enddatetime=20130920T07:00-0000&market_run_id=DAM&version=1&as_type=ALL&as_region=ALL
```

2.1.2. Example URL for the ISO Market Production Environment

To illustrate the use of the URL and its parameters, we show an example based on the pattern above. This string indicates the proper path to query the data for Trading Days beginning with the deployment of the New ISO Market:

```
http://oasis.caiso.com/oasisapi/SingleZip?queryname=AS_REQ&startdatetime=20130919T07:00-0000&enddatetime=20130920T07:00-0000&market_run_id=DAM&version=v1&as_type=ALL&version=1&as_region=ALL
```

2.2. API URL for Group Reports

The group reports depends on the servlet called GroupZip. The GroupZip is going to call a group of singleZips. The XML's embedded in the Zip file will be based on the group type. The data content will be for entire day that the user is going to be requested at a given time you can only request for single day.

To illustrate the URL and its parameters, we show the pattern that would return an XML files based on the Schemas.

```
URL?groupid=<A>&startdatetime=<D>&enddatetime=<D>&version=<A>
```

Where:

```
URL = http://<oasiswebsite>/oasisapi/GroupZip
```

For Production : <oasiswebsite> is oasis.caiso.com

For MAPStage : <oasiswebsite> is oasismap.caiso.com

Mandatory Parameters:

```
Groupid = valid groupid
```

```
startdatetime = valid operating start datetime with timezone offset (yyyyMMddThh24:miZ)
```

```
enddatetime = valid operating end datetime with timezone offset (yyyyMMddThh24:miZ)
```

(Only applicable for HASP,RTM groups)

```
version = API version (1 for the GMT 2013 release)
```

2.2.1 Example URL

To illustrate the use of the URL and its parameters, we show an example based on the pattern above:

```
Example 1: http://oasis.caiso.com/oasisapi/GroupZip?groupid=DAM_LMP_GRP&startdatetime=20130919T07:00-0000&version=1
```

Example 2: `http://oasis.caiso.com/oasisapi/GroupZip?groupid=HASP_LMP_GRP&startdatetime=20130919T07:00-0000&enddatetime=20130919T08:00-0000&version=1`

3. Returned XML File

For every request sent to the OASIS web server, the web server will return a “zip” compressed file. In case of single report or group zip functionality, the user then unzips the file to extract the actual XML file/ files, for further processing by any business or report generation application.

3.1 File Names for single and group

The returned files will use the following naming convention for singlezip:

`startdate_enddate_Report Name_MktRunID_Stamp#_Version.Zip`

Within this zip file, the XML file will use the following naming convention:

`startdate_enddate_Report Name_MktRunID_Stamp#_Version.XML`

The returned files will use the following naming convention for groupzip:

`startdate_startDate_GroupID_N_xml_Version.Zip`

Within this zip file, the XML file will use the following naming convention:

`startdate_startdate_Report Name_MktRunID_Version.XML`

XML Examples:

20131115_20131115_ENE_CB_AWARDS_GRP_N_N_v1_xml.zip
 20131115_20131115_ENE_CB_AWARDS_N_v1.xml

 20131104_20131105_AS_REQ_RTM_20131115_09_44_44_v1.xml

CSV Examples:

 20131104_20131105_AS_REQ_RTM_20131115_09_44_44_v1.csv

3.1.1 XML Format

The structure of the XML (eXtensible Markup Language) format file is based on standard CAISO CIM XML. It is generated by using Servlet call to the common reporting web services framework and using XSLT the xml files will be translated to CIM XML based on xml schemas. The CIM XML is zipped and sent to the requesting users as response, similar to the OASIS operation today.

OASIS will continue to comply with FERC interface requirements and associated implementation standards as it does today. The CAISO believes the use of XML provides information that is more valuable to the end user, and reduces overall development costs as changes occur in the future.

To learn more about the reporting interface and download functionality, please browse through our on-line **OASIS HELP**. Additional support can be obtained by contacting us through the **OASIS Support link**.

3.1.2 XML Schemas

Three XML schemas are developed to conform to the CIM XML standard support data delivery from the OASIS application. Each XML file, when downloaded, will point to the most current version of the Schema.

With the GMT 2013 release, all services will start with V1 and future releases will support the current and previous schemas.

For Fall 2018 release, **OASISCRRPublicBid.xsd** will be moving to version v2.

For CRR1B, **OASISReport.xsd** will be moving to version v7.

For 2019 Independent Release, OASISReport.xsd will be moving to version v8.

XSD	Category	Description
OASISReport_v8.xsd	OASIS Data	This is the primary schema by which OASIS returns operational and market data.
OASISBid_v2.xsd	Public Bids	OASIS returns Public Bid data by this schema. This schema is a derivative of the bid schema used by market participants to submit bids and schedules.
OASISCBBid_v2.xsd	Public CB Bids	OASIS returns CB Public Bid data by this schema. This schema is a derivative of the CB bid schema used by market participants to submit CB bids.
OASISMaster_v4.xsd	Atlas Data	This schema is tailored to the Atlas / Reference data portion of OASIS.
OASISCRRPublicBid_v2.xsd	CRR Bid Data	OASIS returns CRR Bid data by this schema. This schema is a derivative of the CRR bid schema.

OASISCSPOfferSet_v1.xsd	CSP Offer Set	OASIS returns CSP offer Set data by this schema. This schema is derivative of the CSPOfferSet schema.
--------------------------------	----------------------	---

3.1.3 CSV Format

Please note that with the GMT 2013 release version, the CSV format will now return the data elements in the top down format similar to XML in terms of overall layout. There will be the header and the fields will be separated with a comma, but the pivot feature where the hours go across like in the UI is now going away.

The element in the URL resultformat=6 will extract the data in CSV format. If resultformat= element is not in the URL string, the default format will be XML.

The CSV format with the pivot hours across will continue to be supported in the pre-GMT 2013 OASIS web services.

For certain CSV reports that were pivoted across in pre-GMT services, an additional column called “group” will be added as the last column in the GMT version of the CSV reports. Here is the list of the impacted reports:

4. Recommended Usage

By observing the Publication and Revisions Log and Publication Schedule reports, users can submit the requests more efficiently. We strongly recommend first to find out whether the data is already published to the OASIS database. Once the required data is published then submit the requests for the required reports. This way the user can eliminate unnecessary requests for the required data.

5. Reports and Xml Data Items

This section contains an overview listing of the individual types of result sets returned from OASIS, corresponding to the online OASIS reports.

Report/ResultSet	XML Name	XML Data Items	Description
This report displays the MW limits used by the ISO in formulating nodal MW constraints in conjunction with convergence bidding. An upper and lower limit is defined for each Eligible Pnode other than an Eligible Pnode established for an Intertie. This report is triggered with the publication of the Day-Ahead results.			
Contingency Dispatch Resource Schedules Similar to the System Load and Resource Schedules report, but for Real Time Contingency Dispatch (RTCD) runs. Aggregated Generation Outages Generator de-rates and outages which are considered in the Day-Ahead Market. Report is generated from the list of de-rates and outages that are known at the time of publication, typically 5:00 AM PPT the day prior to the operating day.
